The authors regret to mishandle the data in Fig. 8a when processing the original data. In the ESR tests, the curves of Fe-25Cu and ZVI at 1 min are very similar, and the authors unintentionally mixed the data, leading to the curve of Fe-25Cu replaced by that of ZVI. The corrected Fig. 8 is as

follow. The error does not change the overall results and discussion, as well as the final conclusion.

The authors would like to apology for any inconvenience caused.

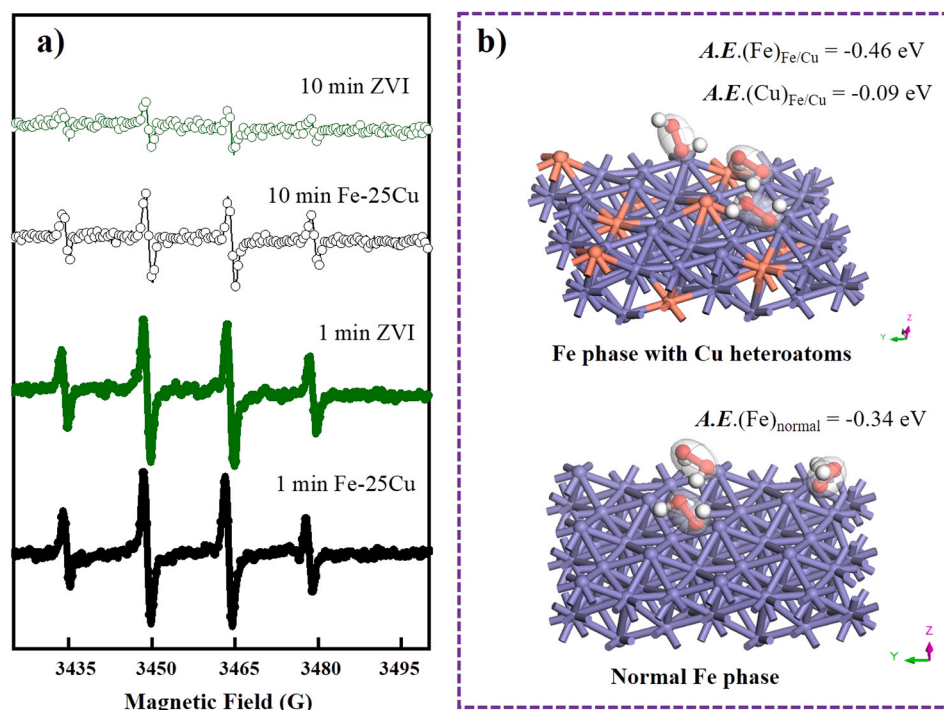

Fig. 8. The EPR spectra (a) of Fenton-like systems via ZVI and Fe-25Cu at 1 min and 10 min, and the optimized configurations (b) for H_2O_2 adsorption on the Fe atoms at the normal Fe lattice (down) and the Cu doped Fe lattice (up): Violet – Fe atom, reddish-Cu atom, white-H atom, red-O atom.
